

# The AeroFlexx Value: Supply Chain Savings

AeroFlexx is a leader in sustainable liquid packaging and revolutionizing what the future can look like. By taking the best attributes of both flexible and rigid packaging and eliminating the negatives, we've created an entirely new form for liquid packaging. The net result delivers a preferred consumer experience and creates significant brand value while introducing unprecedented sustainability benefits.

AeroFlexx can help brands drive growth and overall profitability by creating a sustainable supply chain that leads to savings. Unlock real value through these **supply chain benefits of the AeroFlexx Pak**:

## Start Saving on Your Supply Chain with AeroFlexx

01

### Reduced Complexity of Sourcing

Unlike other liquid packaging solutions, the AeroFlexx Pak is an all-in-one solution. In other words, it doesn't require a cap or label. It ships as a single flat, lightweight package, which means customers don't need to procure items from multiple sources and destinations.

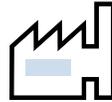

02

### Reduced Transportation Costs and Footprint

By eliminating the need for bottle, cap, and label supply chains, the Pak helps customers save on costs. Additionally, we can fit approximately 1.2 million flat Paks on a standard truck compared to 120,000 traditional bottles. This reduces the number of trucks on the road, which leads to a lower environmental footprint and lower overall costs.

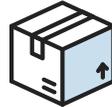

03

### Lowered Warehouse Requirements and Inventory Costs

Because the Pak replaces empty pre-formed bottles, caps, and labels, inventory space and overall costs associated with labor and working capital are reduced.

04

### Amazon ISTA 6 Approved

This approval for shipping liquid via the e-commerce channel allows customers to largely eliminate damage from breakage, leakage, and handling. This can increase customer satisfaction, generate significant savings through lower returns or refund rates, and reduce overall package and labor costs.

05

### Omnichannel-Ready

As soon as the Pak is filled with a liquid product, it's omnichannel-ready and eliminates the need for SKU proliferation based on desired sales distribution channels.

06

### New Size and Shape Development

Flexible manufacturing eliminates the need for capital-intensive molds and tooling costs, which enables rapid adoption at a much lower cost.

07

### Product Safety

The Pak is a hygienic, tamper-proof design that eliminates the use of a discrete closure. Our proprietary integrated valve eliminates the need for a separate cap, pump, or package sealing and dispensing device. This helps keep products safe and prevents product loss.
